

## Scale Kits for Container Handlers

**Weigh Kits for Container Handlers to Meet July 2016 Deadline  
Container Weighing is Now Mandatory**

Now is the time to consider adding a lift truck scale kit

Weigh Point has 2 distinctively different systems for lifting containers; the leaf chain system and the hydraulic system. Both systems can be retrofitted onto your current trucks.

The leaf chain system measures the stress on the lifting chain and provides the greatest accuracy. The typical model BL1688 sensor is especially suited for loads over 100,000 lbs. With safe overloading up to 300% the BL1688 sensor is possibly the strongest lifting component in the truck.

The hydraulic system is an inexpensive approach, but is less accurate than the leaf chain system.
