

FORK-SENSED SCALE

FS7 Series

How It Works

The FS7 utilizes four high capacity load cells imbedded in the forks. The operate with a unique patent pending design that send an accurate weight signal to a state-of-the-art microprocessor display. This system can also use a piece counting weight display for automatically weighing parts. The forks are capable of fitting standard pallets and are equipped with a tapered nose section.

Wireless - cable free "fork-to-cab" wireless transmitter.

Load Cells - The high grade load sensor detects the smallest of weights. Equipped with patented dome technology dramatically reduces recalibration and provides misalignment and corrects control damage errors.

Battery - high capacity rechargeable battery allow labour free exchange.

Forks - under 2" fork thickness provides easy entry.

Modular Design - makes for easy systematic repairs. Your local weigh scale service provider fully understands the WeighPoint system, thus facilitating low cost maintenance.

Accuracy

- Robust weigh system clamps on easily without alterations to the truck
- Especially designed for cross-docking operations
- The choice for shipping and receiving or harsh production environments
- 99.6 to 99.8% depending upon selected model

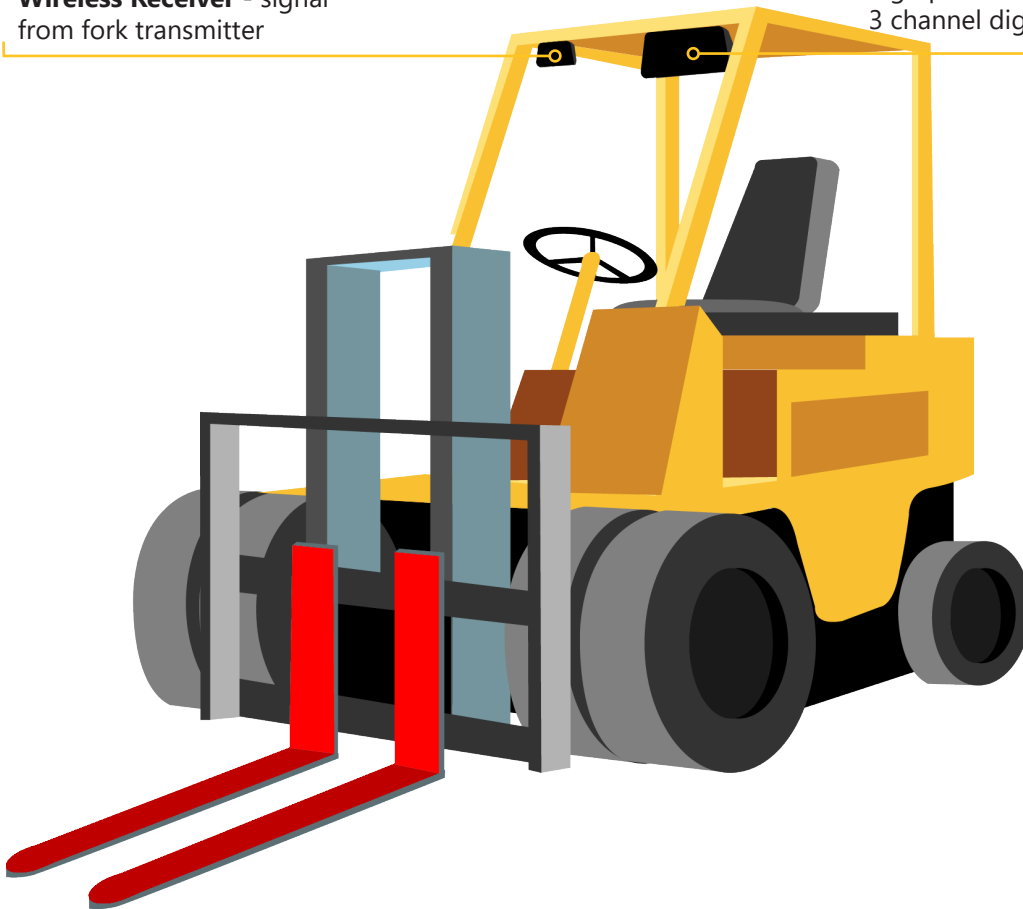

Safety

- The operator view is not obstructive by solid false carriage between the masts
- The lift trucks manufacturers weight specifications are not diminished as there is no need for a false carriage
- Overload alert can control maximum load limits

Rugged

- Years of operation without the need to recalibrate. (Certification can be performed by your local scale company)
- Security code and break seal are required to activate calibration and settings, thus preventing tampering

Wireless Receiver - signal from fork transmitter

WP9500 Indicator (optional) - high performance indicator with 3 channel digital LED display.

Features

- Forks are included in system
- Installs in minutes for testing accuracy or short term operation - the end-user can see results immediately without undergoing costly alterations to the truck or expensive downtime
- Time is money! Save time by cutting out unnecessary trips to a floor scale
- Retains integrity of lift truck, scale does not need to be removed for non-weighing operations
- Easy to operate - no extensive training required
- Serviceability - the system can be serviced in-house by your maintenance department
- The system components are familiar with local scale service companies
- You choose your preferred service firm and we'll provide the information required to keep the system running with a minimum downtime
- Maintains the lift truck's capacity
- The system includes the fork assemblies thus saving the cost of fork procurement
- Can be completely portable thus eliminating installation costs or removal expense
- The outstanding accuracy of this system is guaranteed by its legal for trade-counterpart
- Made in Canada by Weigh Point, a 35-year old establishment

Specifications

- Capacity: two models to choose from; up to 10,000 lb.
- Accuracy 100% (+/- 4 lb.) of applied load
- Standard ITA Class II (other classes available)
- Operates to truck's capacity
- Overload 200%
- Graduations: size selectable
- Units of measure: selectable lb or kg
- Originators of world famous sensed scales
- Patented in US, Canada, Europe

Please note: the FS7 system is derived from our legal for trade model. Although the FS7 has not been government certified the FS7 might meet accuracy requirements for legal for trade status but cannot be utilized for "buy or sell" trade applications.
