

TITAN

31 SERIES

WEIGHT-SENSING FORK COVERS

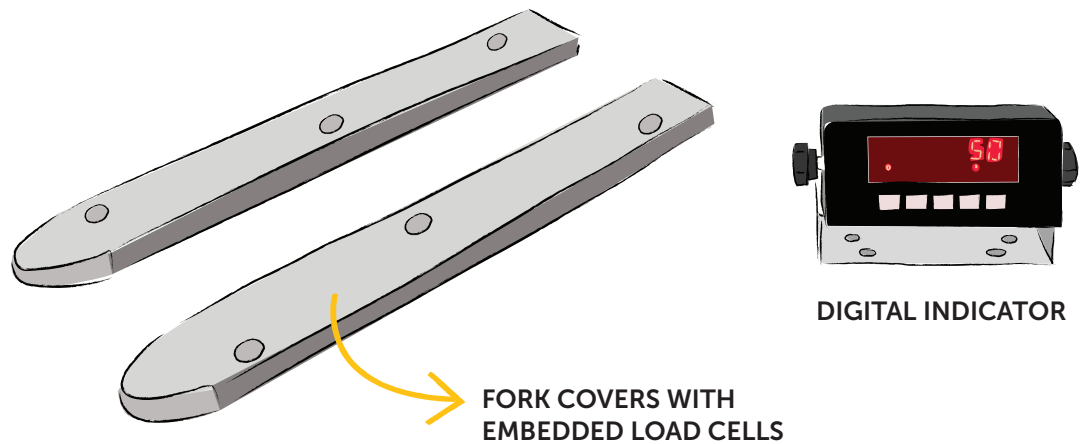

THS31
TELEHANDLER SCALE

The Titan 31 Series of scales feature our weight-sensing fork cover design. The fork covers simply slide onto the existing forks turning your telehandler into a mobile-weighing machine! With no modification to existing equipment, our Titan 31 Series scales can be easily removed and re-installed or transferred between trucks.

The system comprises of two main components:

- 1 one set of weight-sensing fork covers - the fork covers are made of plate steel and embedded with metal foil strain gauges
- 2 a robust stainless steel digital indicator with overload alarm

Options:

Features & Benefits:

- Patented, weight-sensing fork cover design
- Highly accurate; 99% or better +/- 15 lbs.
- Rugged, heavy duty construction and weatherproofing suitable for outdoor applications
- Perfect for attaching to leased equipment
- Does not down rate the truck capacity
- Light-weight system; reduced shipping cost
- High overload capacity
- Large bright LED weigh display
- Adaptable to most data equipment systems
- Minimal truck alternation maintains original manufacturer warranty
- Power derived from truck's battery
- Maintains original fork profile; adds just fractions to existing forks: 0.625" thickness, 0.5" length, 0.875" width, 0.35" lowered height
- Made in Canada

Safety First!

The Titan 31 Series weight-sensing fork covers combined with the overload alarm function provides safe loading to preprogrammed limit. The digital indicator (cab mounted) displays the load weight to 99% accuracy.

The overload alarm is preset to your specified limit. A high audible buzzer and/or light operates if the limit is reached.

The system reduces the risk of telehandler instability; especially with the boom extend. This added safety precaution protects your employees.
